

Compost Protection Fleece

Toptex Compost Protection Fleece is an important tool for optimal compostin - for a perfect composition of valuable compost.

The Benefits at a Glance

- Toptex maintains optimal moisture conditions
- Toptex ensures proper aerobic decomposition
- Toptex minimizes leachate and nutrient losses
- Toptex reduces odour emission
- Toptex diverts rainfall away from the surface and protects from drying by sun and wind.
- Toptex allows the necessary gas exchange and ensures more optimal temperatures throughout the outer layers of the piles.
- Toptex diverts rainfall away from the windrows and therefore minimizes the incidence of leachate.
- Toptex supports an optimum an-aerobe decomposition process, thereby reducing odour emission to a minimum.

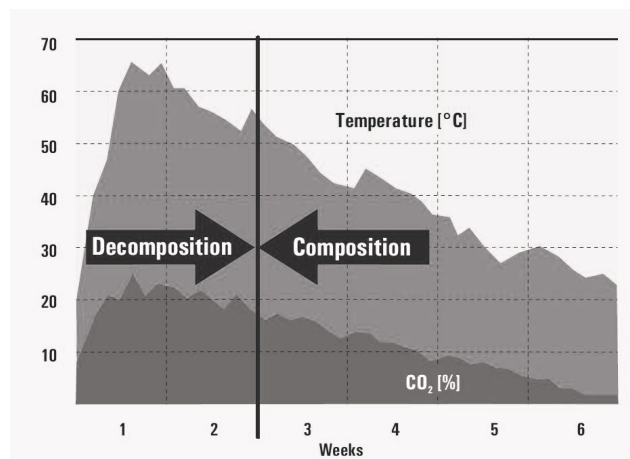

Controlled humus building through composting of organic wastes

Composting is the conversion of organic wastes into high-quality humus. Through systematic controls these materials can be returned to the earth, completing the cycles of nature and improving the soil to which it is applied.

To achieve this goal, strict guidelines and controls must be followed. This includes the proper selection of the feedstocks, regular turning of the piles for aeration, and proper guidance of the decomposition process.

Therefore, several parameters such as temperature, oxygen levels, CO levels, pH value, sulfide, nitrite, nitrate, and ammonium must be continuously monitored, and if necessary adjusted (table).

Due to its physical characteristics, Toptex Compost Protection Fleece is an important tool for optimal composting.

Temperature and CO im the compost

Flexible Lining Products is a trading style of Greentech Ltd.

Rabbit Hill Business Park, Great North Road, Arkendale, Knaresborough HG5 0FF

Decomposition parameters	
Temperature:	max. 65°C
Moisture:	55 - 60%
CO2 content:	max. 20%
Oxygen level:	> 5%
Compost parameters	
pH value:	< 8
Nitrate (NO ₂):	not detectable
Nitrate (NO ₃): winter summer	< 100 ppm < 300 ppm
Sulfide:	not detectable
Ammonium:	< 2 ppm

Optimum conditions in the compost pile

Over a decade of experience in applications world-wide

Toptex compost protection fleece has proven itself in compost sites around the world, and belongs to today's standards of modern composting technology. Many windrow turners are now serially equipped with fleece rolling devices.

Using Toptex for covering mature compost

Many experienced users use Toptex Compost Protection Fleece for covering their most valuable product: the mature compost! This is an economic solution and easy to handle. The fleece allows exchange of gases, protects against moisture, keeps the compost dry and in a crumble structure. It also protects efficiently against the growth of all kinds of weeds. This method allows an effective and economic open air storage of mature compost.

Using Toptex for the storage of raw manure

Use Toptex compost protection fleece for the storage of raw manure as well. Scientific studies show that nutrient losses can be reduced significantly with TopTex Compost Protection Fleece. Government guidelines and best management practices recommend the covering of stacked manure which is stored outside (e.g. in accordance to the LGW 1992 from 12/95, Austria).

TenCate Toptex is a gas-permeable fleece composed of endless 100% polypropylene fibres. Toptex is...environmentally compatible (certified inert), recyclable, chemically stable against acid and alkali (pH 2 - 13), biologically stable against microbial decay and leachate (VOA & VOC), freeze / thaw tolerate, UV-resistant through special UV stabilization.

**Roll length: 50 m, Roll width: 4, 5 or 6 m
Roll weight: approx. 40 / 50 / 60 kg**
